

Lightpanels en Lightboxes

Put your message in the spotlight

The latest LED technology and superior prints on backlit material ensure that your visual really comes to life in our Lightboxes

Our incredibly thin Lightpanels and custom made Lightboxes are the most effective solutions to show your visual or logo on the trading floor or in-store.

All our **illuminated visual communication products** are single or double sided and can be free-standing or wall mounted.

Lightpanels

With modern print-exposure techniques, Van Straaten creates super thin, striking Lightpanels with spectacular visuals. The aluminium frame has a special acrylic plate inserted on which a grid with laser technology is applied. As a result, the LED light on the edge of the frame is evenly spread over the entire surface of the plate.

The frame gets a Pearl canvas with full colour visual. "Pearl is specially designed for backlit applications and lets the light shine through. The tendon structure on the edge of the canvas makes it possible to easily place the visual in the aluminum frame. Visuals can be changed extremely quickly.

The result is a surprisingly thin panel that can be used freestanding or can be mounted on the wall. The maximum size for a single light panel is 3 by 2 metres.

Lightboxes

For larger applications, you can choose a Lightbox with power LED. This powerful light source is inserted in the edges of the frame. The ultra-modern power LED technology ensures uniform illumination of the visual.

We can make custom made Lightboxes in any size you want. LED is energy efficient and generates little heat, which is definitely a plus for large headlights. Visuals in XL Lightboxes are quick and easy to change and are evenly lit.

Applications

Retail, exhibition, showroom, reception, indoor advertising.

Finishing and assembly

A Lightpanel is quick and easy to set up and stands on a solid base. Van Straaten assists you in installing Lightboxes on the wall or any other surface.
