

The 'MePOS' is the world's first '5-in-1' intelligent self-diagnostic Tablet Point of Sale (POS)
With one single product you can now create the following 5 modes of selling, enabling you to decide how you would like to set up your POS. The modes are;

1. Traditional cashier mode with integrated PED (Pin entry device)

2. Traditional cashier mode with PED free-standing

3. Traditional cashier mode with PED free-standing and MBU reversed

4. Stand-alone kiosk mode

5. Mobile point of sale (mPOS)

Intelligent Diagnostic System

The MePOS is unlike any other tablet based POS in the market. Within the Main Base Unit (MBU) is an intelligent diagnostic system we call the 'brain'. It not only runs all devices attached, but also performs set-up diagnostics every time it is switched on, similar to your car when the ignition is turned on. The brain also performs 'condition-based monitoring', it continually checks all devices are working as intended.

In the unlikely event of a problem, the user is notified. This system saves huge time and money on support calls and maintenance, ensuring more time is spent with customers.

Other features and benefits include

- Ability to interchange tablets and PED's
- All platform options available; iOS, Android & Windows
- Additional ports for scanner, keyboard and cash drawer
- Serial PED port also included
- Wireless printing from MPOS mode
- Single power supply, just one plug for all devices (tablet, PED, printer, brain, scanner & cash drawer)
- Small form factor saves counter space
- All outer panels are removable for personalisation and branding
- Integrated anti-theft security
