CASHINFINITY™
SMART Cash Management
SMART Cash Management, CASHINFINITY

GLORY Retail Solution offers SMART cash management. It provides total secure closed cash handling, centralised control of cash inventory and optimisation of all cash processes throughout a store. CASHINFINITY is the most advantageous cash management system with remarkable flexibility and extensibility for retailers to fit any size of store, various business segments and each investment plan.

Cash handling within the retail sector is costly and requires significant staff resources at all steps of the process. That’s why accuracy, efficiency and security are important. The retail sector is very diverse, and therefore a complete range of solutions is necessary to cater to the specific needs of each shop or chain store.

CASHINFINITY offers many benefits for retailers

- High security against attacks and theft
- Improves productivity, customer service and fund efficiency
- Eliminates discrepancies in cash
- Reduces CIT pick up and delivery
- Real-time inventory of cash / status management

1. CI-100
   The cash recycling system CI-100 handles not only the interface cassette of the CI-10 but also the loose notes from a manual cash drawer. This unique function gives retailers flexibility and extensibility. Direct coin dispense into the specified manual cash drawer enables the cashier to prepare change funds quickly and easily. Two types of banknote collection (safe bag or collection cassette) are available.

2. Interface cassette
   The interface cassette is a key component of the CASHINFINITY secure closed cash management. Interfacing CI-10 and CI-100, banknotes are transported securely from front office to back office or from back office to front office without exposure.

3. CI-10
   The compact cash recycling system CI-10 is stylishly designed in straight lines so that it can be integrated into cash desks and self-checkouts easily. A “Follow me” LED sign helps customers to operate the device by themselves comfortably. A stacking collection cassette is also available, in case the CI-100 is not part of the system.

4. CI-SERVER
   CI-SERVER cash management software can be operated via a web browser, offering centralised cash management throughout a store: within the front/back office, when the interface cassette is in transportation and the safe in the back office.

5. Integration into POS system
   CASHINFINITY uses its existing POS system network so that there is no need to invest in additional infrastructures. With CASHINFINITY, our strategy is to be open and able to integrate with other systems.

6. Manual cash drawer
   CI-100 counts and dispenses in two ways: loose notes and also via the interface cassette, so that not only the CI-10 but also manual cash drawers can be available at the checkout. This remarkable flexibility allows various deployments to be made to suit different investment plans.
Streamlines daily work of manager / cashier

Cashier prepares change fund
Manager reconciles at the end of the day
Cashier deposits day sales
Cashier transports interface cassette to front office
Cashier replenishes change fund
Cashier works with automated cash in/out processing
Cashier transports interface cassette to back office
Cashier collects day sales

Functionality highlights

Exit shutter
Avoids handing over partial change to a customer in the event of an incomplete dispense due to jamming/inventory issues.

Collection through outlet
Allows for non-stop coin collection into the bag/tray.

Slide extension unit
Makes integration into various cash desks easier, height is also adjustable.

Free layout of recycle module
Frequently used denominations can be assigned to multiple recycle modules.

Reject foreign objects
Enables non-stop counting and reduces jam rate.

Error recovery animation
If an error occurs, the POS screen can show a troubleshooting animation to resolve the problem.
